

KeyOS MultiMark™ Server

JUST-IN-TIME WATERMARKING WITH DRM

www.BuyDRM.com

KeyOS MultiMark™ Server

Carrier-Class, Studio-Approved Content Security Platform

BuyDRM's content security platform, KeyOS, is a SaaS DRM platform which is operated using both managed hosting and cloud infrastructures. The platform components encompass the full spectrum of DRM requirements including, forensic watermarking, content encryption technologies, rights policy creation and enforcement, license key delivery services and secure content playback. KeyOS represents the evolution of several decades of commercial content security deployments and supports a wide ecosystem of encoders, servers and players.

KeyOS MultiMark Server

The MultiMark Server is a just-in-time (JIT) forensic watermarking and DRM platform that enables streaming operators to watermark video content JIT and protect it with DRM before distribution. The platform includes support for DASH and HLS streaming formats and the consumer DRMs, Apple FairPlay, Google Widevine and Microsoft PlayReady. MultiMark creates and manages watermark forensic metadata (WFM) which are the unique records of all watermarking sessions. When piracy has been detected, WFM is injected into a secure detection process of the sample pirated content to track any misuse directly to the offender.

Forensically-watermarked video content wrapped in consumer DRM affords the highest level of security available for streaming and downloadable video.

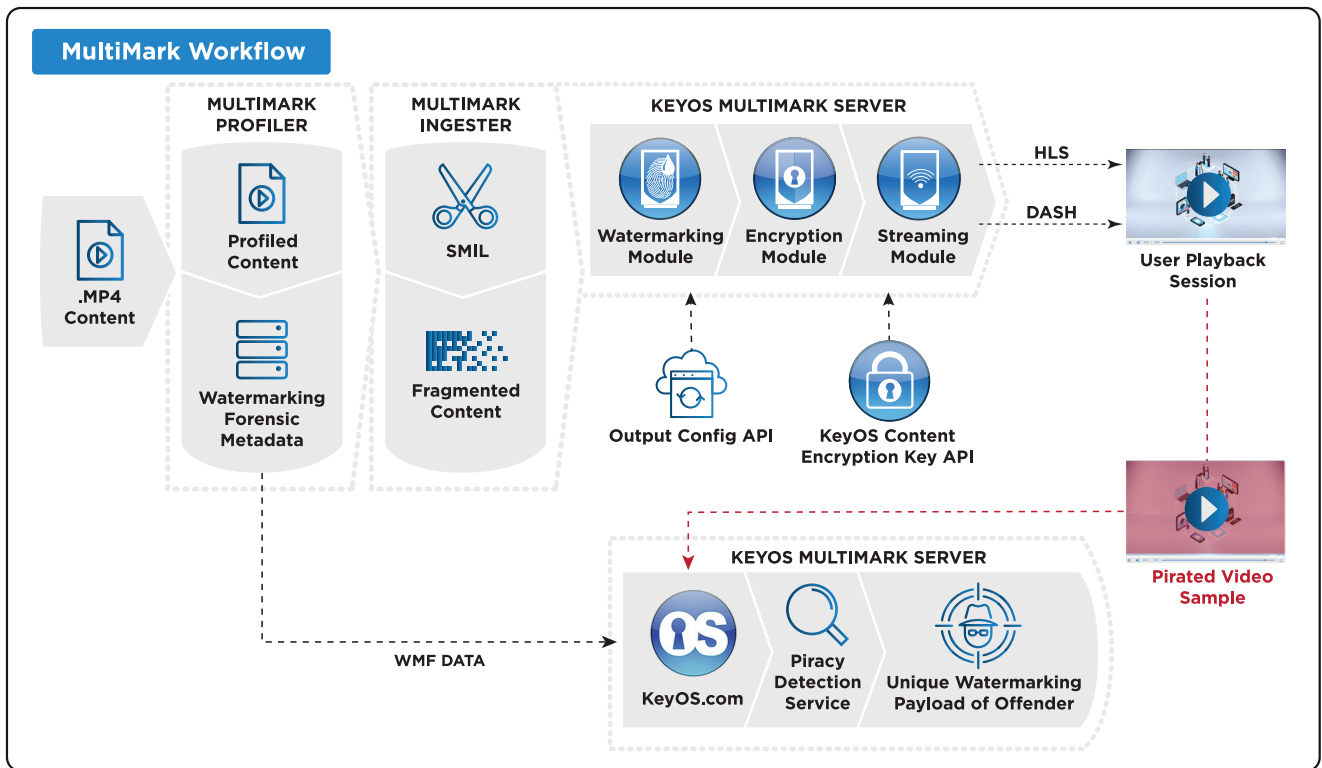

Deployment Options
